and a complement of scientists (as in deed the
Staten Island was) and let loose along the less
accessible Antarctic coasts for an ^{auxiliary} outfit April
with launch and helicopter as auxiliary aids,
she could do more valuable work in that time
than any static wintering party could accom-

plish in a whole year

fair. As ^{the} Staten Island buttered her way along
I saw more of ^{the} Antarctic coastline than I had
imagined in my most optimistic dreams. I can
imagine no more productive means of coastal
exploration in Antarctica than to give such
a ship a free hand for the whole summer sea-
son. In 16 days she had buttered her way
through 16 miles of solid ice, 6 to 8 ft thick ⁱⁿ
